Online Now!

PermaCrete now offers a fully-accredited online, continuing education course (CEU) for architects, specifiers and engineers through AEC Daily, the largest source for continuing education in America.

Architects in America must have 18 hours of continuing education annually, and the American Institute of Architects (AIA) now requires that all members take four hours of *sustainable-design* coursework each year in order to retain their membership. PermaCrete's course, entitled "*Polymer Concrete Surface Systems: A Green & Sustainable Solution,*" is accessed at aecdaily.com/sponsor/permacrete and grants one (1) hour of CEU credit to each participant.

All PermaCrete products are green and sustainable with volatile organic compound (VOC) emissions of less than 10 g/l, and PermaCrete surface applications qualify for up to **8 LEED project points** within the scope of most building projects seeking LEED certification.

PermaCrete is the only product that has successfully completed all code requirements for compliance with both vertical (AC 219) and horizontal (AC 39) surface applications by the International Code Council's Evaluation Service (ICC-ES), and are distributed worldwide to over 1,200 independent PermaCrete Dealers located in all 50 states and 27 foreign countries.
